CIPHERRA

COMPANION FOR ARCHITECTURAL WORK

From drawing intent to visual impact.

Cipherra is your companion for drawing, visualization, and walkthroughs. Describe what you need in architectural language, let it work with your drawings, and review every result before it moves forward.

Bubble diagram → 2D CAD → Rendered 3D → Enhanced stills → Walkthrough

THE COMPANION Describe it. Work the drawing. Review the result.

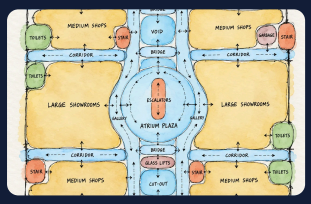

Describe the task
Use architectural language: shops around the atrium, refined cores, updated grids.

Work with the drawing
Supported CAD tools edit and generate drawings in place, layer by layer.

Stay in the loop
Inspect every change against the source and refine until it is right.

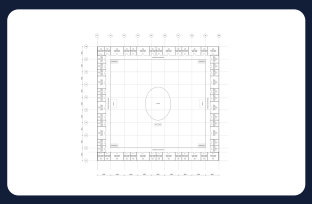

THE WORKFLOW Real project work, stage by stage, with review built in.

01 Bubble diagram to generated CAD plan

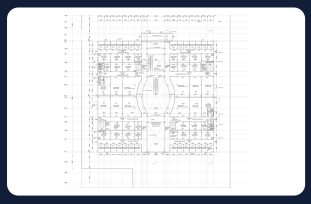

Bubble diagram → Generated CAD plan

02 Basic layout to refined CAD drawing

Starting CAD drawing → Final CAD drawing

03 2D CAD to rendered 3D model

Mall first-floor plan → Rendered model

04 Render to enhanced image

Base gallery render → Enhanced gallery image

05 Still images to a walkthrough Wellness resort, Udaipur

Selected architectural stills → Walkthrough video

Review is built into every stage. Plan generation works from labeled CAD bubbles, requirements, and reviewed decisions (sketch shown for illustration); checks and advisories support review and do not establish code compliance. Enhanced images are reviewed against their base render.

Bring Cipherra into your next project.

We're working with early architecture and design partners on real drawings and real projects.
